

Sustainable Resources

University College London (UCL) contacted BESST as part of their research to identify sustainable organisations for their visit to Shropshire & the West Midlands. BESST Chair Andy Whyte of Ricoh hosted the inaugural visit on 25 October 2016 at the Priorslee site for ten UCL students & researchers.

Andy gave a presentation to the students on Sustainable Manufacturing and how Ricoh continually improve their waste streams, resource efficiency on such projects as implementation of variable speed drives.

Students were particularly interested in Ricoh's remanufacturing process, hearing about the Circular Economy and the 3D printing facilities in place at Ricoh.

Feedback from UCL and the students was extremely positive and UCL are now looking to implement a schedule of visits for future students.
